To be honest I am not quite sure what people will think of the title.

I suppose there will be those that think it should be easy to do and those of you that have been around for a while and not managed to make any money from horse racing, let alone doubling your bank.

I am probably not the first to try an experiment like this in public. But I bet it doesn't happen often.

Before I go on please understand that this is a test…

I am not implying or suggesting you try what I am attempting.

It is purely just to see what happens when we try a test like this in public.

Sporting Bots Labs is about experimenting.

It may work it may not.

It's all down to the systems I have chosen and how they will perform over the next 90 days.

In some ways this is the worst time of the year to start a test like this.

We have bad weather.

We are in the winter season with a lot less races which means it is not as easy to make a lot of profit.

By the end of the test, we will at the end of the NH season making selecting runners tricky.

But if you are going to set yourself a challenge you may as well make it interesting ☺

Of course it would be great if instead of 90 days I could tell you that this could be done in just a month.

But it isn't the norm and it would be wrong of me to even suggest to people you have any chance of doing it.

I do think with the right systems, the correct staking plan and a bit of patience (maybe a bit of luck) then doubling your bank in 90 days is possible.

Who systems to trust?

I think that a reasonably good system should be able to give you around 10 to 20 points (on average) return a month.

That doesn't mean every month you will get that return. But over a year that is the sort of profit you are looking for.

I have been around betting systems for over 12 years and I can tell you from experience that this is a more realistic figure to the ones a lot of people out there are saying are possible.

Ok there are some systems that do seem to be able produce big profits over a short period of time but even those end up leveling out over a year.

Of course there are plenty of systems that have had big expectations but never delivered.

And I understand that, but there are ones that work, as long as your expectations are not too high.

Unfortunately there will be people who read this that are looking to make massive gains quickly still not realizing that it just isn't going to happen…

Even if you are lucky enough to get on one going up quickly it will be short lived and you won't have stopped using the system before you lose half of what you gained on the way back down.

I have said this for years (my proof is in my blog posts) that it is about having "micro" systems that added together create more and more profit.

And I think 3 reasonable micro systems should be able to give you around 30 or so points profit each, which over the 90 days should add up to around 100 points.

I can give you a couple of examples…
http://luv2lose.co.uk/

http://luv2lose.co.uk/data-all.asp?myMonth=9&myYear=2012&sys=2
http://luv2lose.co.uk/data-2012.asp?myMonth=9&myYear=2010&sys=3
http://luv2lose.co.uk/data-2012.asp?myMonth=9&myYear=2010&sys=4

All 3 systems together probably gave you about 10 points a month.

http://www.acenaps.co.uk
(A trial we are doing with Grey Horse Bot at the moment)
Since our trial started we are up about 41 pts on the backs. Although I am still not sure about the lays they will probably add some to the bank.
(Read my report here)

http://mr2bot.co.uk/
Things didn't go as expected at the start but we have worked hard on this service and ID7 which was launched in July last year is now showing over 100 pts at the recommended price ranges.

I am not trying to suggest you join any of the above services I am just pointing out that achieving 10 points or more a month is possible.

But if you are looking for 30 or more points consistently a month then it is doubtful you will get that from one system.

Where to start…

If we start with a bank of 100 points our aim is to turn that into 200 points within the 3 month period.

By the way I haven't just put 100 points in one bank.

We have a lot of Betfair accounts but even we are limited and we have multiple tests running on all out accounts.

So the 100 points will be established in the spread sheet and all profit and loss will be shown against it.

I must point out something here…

Normally I would have 100 points to use on each system not 100 points split between 3 systems.

I know from experience it is not unusual for a system to have a losing run of 100 points and I really don't like using any more than 1pt per selection, unless the strike rate of a system tells me I should use less.

If you have a system with a strike rate of 12% then it is likely you will have a losing run of up to 59. Double that for safety and you are now over 100 and a stake of 1 point could wipe out your bank (more on this in a moment).

The first system makes this even more difficult because it is a lay system and I want to bet on every selection I can, no matter what the price.

And the only way you can do this is by limiting your liability (I will cover this in a moment).

The lay system we are going to use is SPB-Labs-ID6-lay.

I have written a whole report about it which you can read here.

http://sportingbotslabs.com/ids/spb-labs-id6-lay.pdf

Now for the "Famous last words"…

…I am quite confident about this system and what it should be able to produce as profit, which is why I chose it for this test.

End of the "Famous last words".

But as you will probably be aware you can never tell when it comes to lay systems.

Up to now this system has been performing the way we were expecting…but the problem is that quite a few (probably 100's) of people will be following it from today.

And my experience tells me this will probably change the profitability of the system…but I have no choice.

I have to show you what I am betting on otherwise you have no way of checking if what I say is true or not.

I was thinking of giving the selections to one of these proofing sites but I thought why not show you first hand, then you can make up your own mind if what I am telling you is true or not.

Just for clarity as well I will add a screen shot from the bots every couple of days.

As I mentioned earlier I want to bet to liability so I am going to use a 10 points liability stake.

This means the most I can lose at any one time is 10 points.

The Grey Horse Bot does this for me…

…Before it stakes is divides my 10 points by the odds available on the Betfair Market.

So if the odds are 5.00 (After we take off Betfairs 1) then my stake will be 2pts.

2 x 5 = 10

Nice and simple with a betting bot like the [Grey Horse Bot](#).

Although this system is showing signs that it may double its bank in two month's, It still only has a strike rate of 84% which means it could have 5 Losers in a row at some stage.

If we doubled that for safety, then we are looking at a losing streak of 10 and staking to a liability of 10 pts means 10 losers will wipe out our bank.

People ask why I use such a safety margin…

…Here is why…

The strike rate tells us our possible LLR (Longest Losing Run).
http://www.sportingbotslabs.com/strikerate.asp

But it doesn't tell us how often it will happen.

I have seen many lay systems go on for 50 or 60 selections without losing then the first 3 losers in a row come along.

That normally shocks people.

It then wins…a sigh of relief.

It then losses 3 more times in a row and wipes out most people's banks!

It does happen.

But there is also a psychological (big word for me) element about it as well and I know this happens…

We have all heard the saying *"Don't bet with money you can not afford to lose…"*

And here is the problem.

Many of us bet with money at the best we really don't want to lose and worse we really CAN NOT afford to lose it.

So we start following a system and it begins losing…

Let's just say we have a £100 bank.

We lose 10% which is probably £10 for most sensible people but could be £20 if you are staking higher than 1%.

That £100 is now £90 and then goes to £80.

£20 from a £100 bank that you can not really afford to lose is a lot of money.

And many people reading this would give up on a system that wiped out 20% of your bank.

But it's not unusual to have losing streaks far larger.

Many systems we test at Sporting Bots Labs lose 50 points in a row before coming back into profit.

It is important you ask yourself this questions…

"What am I prepared to lose before I give up on this system?"

"Based on the strike rate of this system what is the best stake size to use which gives me the best chance of continuing to follow this system and not meet my stop loss limit?"

If you at least ask those two questions then I reckon your stake size will reduce to what your normally use.

And that is why I think I would actually be more comfortable with a 5 point liability stake. But in this test I need to give myself some chance of meeting my target.

So I am going to take the risk…but you most certainly…shouldn't!

If you have read the initial ID6 report by now then you would also know there are some alternative price ranges I could look at.
http://sportingbotslabs.com/ids/spb-labs-id6-lay.pdf

But again for this test I am going to use the whole 1.02 to 999 range.

The last thing I wanted to let you know about is that we only test systems Mon to Friday.

Why don't I use Saturdays or even Sundays?

Well first of all I like a rest and I almost always have the weekends off.

Although I may be wrong about this (and I know some people do not agree) I always find the weekends never add to the overall profit of a system, when I have taken the time to add them into a test.

In fact it's normally the opposite, overall they are just not profitable.

Of course if I looked deep enough at any system I could probably find other days that are similar.

We may be able to take out all Monday's or all Thursday's, but for the moment we don't bet on Saturdays or Sundays.

So Just to clarify.

Start Bank is 100 points
Stake for system 1 is 10 pts liability
Price range 1.02 to 9999.
First system is SPB Labs ID6 lay
Selections Mon to Fri only

The official start date was the first day I released the report and selections to Grey Horse Bot owners so they could follow them which was 18/01/2013.

(For the skeptics out there we actually lost over the first few days so I am not trying to cheat in anyway.)

In the next part of this series I will introduce the next system.

So on with the test…

If you want to follow along and you haven't registered then you can here.
http://www.greyhorsebot.co.uk/90dol.html

You will then receive an email showing you how to get your hands on the selections, results and screenshots from the bots.

Thank you as always for reading I really appreciate it.

Disclaimer:

This report is for information only. In no way we are advising you to act on the report or to bet on live markets. Please seek proper advice if you are unsure what to do.

Our results and reports are based on betting through Bots on the Betfair market around 60 seconds before the off.

Because our prices are based on what we have achieved on the market and not SP or BSP we can only show what happened to us.

Unmatched bets, prices out of range and other factors may influence your results compared to ours so we can in no way guarantee that you will achieve similar results.

In fact your results could be worse.

Please see Betfair's information on how they match bets.

Matched bets can be influenced by timing, stake amounts and other factors.

Online or off line betting is not appropriate for everyone.

There is a substantial risk of loss associated with betting. Losses can and will occur.

No system or methodology has ever been developed that can guarantee profits or ensure freedom from losses.

No representation or implication is being made that using the information on this report/article will generate profits or ensure freedom from losses.

Hypothetical performance results have many inherent limitations, some of which are described below.

No representation is being made that any account will or is likely to achieve profits or losses similar to those shown.

In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular betting program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight.

In addition, hypothetical betting does not involve financial risk, and no hypothetical betting record can completely account for the impact of financial risk in actual betting.

For example, the ability to withstand losses or to adhere to a particular betting

program in spite of betting losses are material points which can also adversely affect betting results.

There are numerous other factors related to the markets in general or to the implementation of any specific betting program which cannot be fully accounted for in the preparation of hypothetical performance results and all of which can adversely affect actual betting results.

HYPOTHETICAL OR SIMULATED PERFORMANCE RESULTS HAVE CERTAIN LIMITATIONS.

UNLIKE AN ACTUAL PERFORMANCE RECORD, SIMULATED RESULTS DO NOT REPRESENT ACTUAL BETTING.

ALSO, SINCE THE BETS HAVE NOT BEEN EXECUTED, THE RESULTS MAY HAVE UNDER-OR-OVER COMPENSATED FOR THE IMPACT, IF ANY, OF CERTAIN MARKET FACTORS, SUCH AS LACK OF LIQUIDITY.

SIMULATED BETTING PROGRAMS IN GENERAL ARE ALSO SUBJECT TO THE FACT THAT THEY ARE DESIGNED WITH THE BENEFIT OF HINDSIGHT.

NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFIT OR LOSSES SIMILAR TO THOSE SHOWN.
